Hosting Without the Hassle

Terra Dotta's Hosting Services provide you the opportunity to securely host your data on Terra Dotta servers instead of your own campus. This service is available to both new and current clients looking to manage costs and streamline their processes outside of their campus servers.

Why Should I Migrate?

We understand that most universities have an IT staff that is stretched thin. Whether your university doesn't have the time or the means to host Terra Dotta software on your campus, our Hosting Services allow you to spend less time worrying about your data security and more time working with students, faculty, and staff.

There are a number of challenges associated with hosting Terra Dotta software on your campus, including:

- Knowledge continuity: system admins come and go without always maintaining adequate documentation. Hosting with Terra Dotta eliminates this risk.
- Maintenance overhead: unexpected costs or budget changes can affect your institution's ability to maintain your system.
- License/infrastructure costs: over time, new versions of server software and servers

themselves can live out their lifespan. The costs of server updates get spread across all our clients in the Hosting environment.

- System breakdown: without careful oversight, system hardware or its recovery plans can and do breakdown. Terra Dotta's servers are constantly maintained and have recovery plans in place.

The Advantages of Hosting with Terra Dotta:

- Terra Dotta engineers can access your server right away, no time is wasted scheduling a call with your campus IT
- Terra Dotta integration specialists have utilities for rapid implementation and diagnostics
- Our high-tech team is familiar with not only the hardware, systems, and network, but with the Terra Dotta software itself
- You will receive the new version upgrade right after its release date, rather than waiting for

campus IT to schedule it 6 or even 12 months later

- If a software patch is needed, we can roll it out on our hosting systems up to several weeks before it's available for installation elsewhere
- Our hosting servers are optimized to run Terra Dotta software; we aren't able to guarantee that quality on servers we don't manage.

Cost:

Migration to Terra Dotta hosting is an established practice for us, and we have a simple pricing scheme:

- \$6,500 for migration services and project management
- \$2,000 for conversion from Oracle database (if applicable)
- \$1,500 for integration with campus data systems
- \$3,900 annual hosting fee

* Except for the annual hosting fee, these are all one time fees.
