

Quick, Easy, Attractive? YES. Customizable? CHECK. Automatic reporting? YEP, that too!

International offices need to present operational statistics to multiple institutional stakeholders in a clear and concise manner. Visualizations, Terra Dotta's latest software advancement, helps you by generating graphic representations of the data that already exist in your Terra Dotta Software. They look great, tell your story simply and clearly, and are always ready to share.

How it Works:

As an optional enhancement to your Terra Dotta software, you can get started with Visualizations for a one-time set up fee; after that, it'll always be there, helping you analyze your data. You determine the level of reporting and visualization that your office will require. We then work with you to determine how the data can best be visualized, and on which program and student characteristics you would like to report.

Once these determinations are made, we will create a set of options customized to your

institution, install these additional features on your TDS instance, configure your TDS database, and advise you through the process of adding Visualizations to your TDS website.

When someone wants to know the when, where, why, and who's of your international programming, you simply give them the link.

- Bar, pie, and donut graphs
- Year-to-year comparisons
- Report on participation by program characteristics and

participant characteristics - terms and locations, gender and age

- An entire page dedicated to describing your current program offerings
